

Eco Waterhouse System whole house filtration

Eco Waterhouse System solves the complexities of water filtration by delivering the highest quality components and standards in the industry, while also maintaining an optimal level of environmental responsibility! Designed specifically for reducing chlorine, chloramines, chlorination byproducts, and water-soluble heavy metals from household water, this green whole-house water-treatment system treats water without the use of salt or chemicals. As a green solution, it is also energy-efficient and uses 100% recyclable Media.

Eco Waterhouse System SOLVES THE PROBLEMS OF HARD WATER ScaleStops anti-scale system addresses the negative aspects of hard water with an environmentally friendly solution. The system utilizes a sophisticated anti-scale catalyst, which dissolves hardness into microscopic crystals, and inhibits scale from adhering to plumbing and appliances, while providing optimal water quality! **Eco Waterhouse System** is the right choice for clean water!

INTELLIGENT DESIGN

Eco Waterhouse System was designed for exceptional durability, longevity, and convenience. From the corrosion-resistant control-valve to the rugged tanks and superior medias,

ELECTRONIC CONTROL-VALVE

Eco Waterhouse System electronic control-valve ensures that the right amount of conditioned water is available on demand. This intuitive system regenerates based on the total volume of water used, allowing for the highest level of efficiency possible. The electronic control-valve is programmed to clean the media as needed, which greatly reduces water-waste.

RELIABLE SOLID-STATE TECHNOLOGY

- Smart electronics are automatic and fully programmable, and display remaining gallons and time.
- Memory back-up during a power failure; once the clock is set, all settings and historical data remain unchanged, with no loss in service.
- No maintenance; system automatically back flushes, rinses and cleans itself as needed.
- Bypass-valve allows the option of bypassing the system.

LONG LASTING DURABILITY

Eco Waterhouse System features long-lasting medias, corrosion-resistant components, and a durable leak-and-corrosion-resistant tank.

PROVEN ADVANCED ANTI-SCALE TECHNOLOGY

Eco Waterhouse System system utilizes only the most advanced technologies, medias, and components available, including an advanced anti-scale Catalyst. This catalyst breaks down solids while keeping them suspended in solution, which prevents them from adhering to plumbing and water-using appliances. This system has scale-inhibiting properties, and is effective in reducing hard water scale-formation.
