

Vortex Water Energizer

The Vortex Water Energizer (approx. 20 cm height, 18 cm greatest diameter) is a spiraling copper device. It contains highly energized water, which has been prepared using an innovative new process called Implosion. Whilst this process is new to technology it is actually as ancient as the Universe.

Researchers in the UK at Center for Implosion Research have discovered how to restore this vitality principle to your normal household or agricultural water, thereby increasing its healing and livingness properties. A look at some of the results of using their Vortex Water Energiser are quite impressive:

- Plants watered with Vortex energized water shows 250% increase in crop yield.
 - Plants required 50% less feeding with Vortex energized water.
 - Pool require 80% less chlorine with a VWE on the water intake pipe.
 - Vortex energized water shows substantially increased geometric structure of water molecule.
 - The Vortex Energizer in ponds increases oxygen and reduces bacterial growth and stagnation.
-
- Spiraling device made of triple copper tubes filled with highly energised imploded water.
 - A by-product of Viktor Schauberg's Eco-technology research.
 - Attached to the incoming water main, it transfers a level of energy which softens the water and de-scales the pipes, improves the taste and balances the pH.
 - If the water running through a house is made healthy, the whole environment of the home is improved.
 - The Vortex Energiser is known to help keep a pond or pool clean, though a swimming pool might require two to eliminate algae etc

- Requiring no electricity, the spiral shapes acts like a cosmic antenna and amplifier which takes energy directly from the sea of quantum energy surrounding us.
- Water is the ideal medium of resonance, the 'lifeless' water picking up energy from the Vortex by transference, rather as one tuning fork can be set off by another through resonance.

Industrial Vortex Water Energizer

Increasingly the Vortex Energizer is being used for industrial and farming applications. These applications include wastewater, soil, compost and irrigation treatment. In recent industrial trials in Holland and Spain, the Vortex Water Energizer was able to turn compost from an anaerobic state to an aerobic state. Following these successes we have now developed an industrial version of the Vortex Water Energizer. Made from heavy gauge copper tubing, this robust energiser is designed to meet the demands of industrial use.

The Industrial Vortex Energizer is approximately the same size as the standard Vortex Water Energizer, but is made from much heavier gauge copper tubing. The Industrial Vortex Energizer is therefore much heavier and more robust.

As a guideline, use 1 standard Vortex Water Energizer on any pipe up to a diameter of 2 inches, 2 Vortex Energisers for a 3 inch pipe and 3 Vortex Energisers for a 4 inch pipe. Several Vortex Energizers can be attached to a pipe in a cluster around the pipe or spaced out along the length of the pipe - whichever is more suitable.

Initial tests have shown that in applications where 3 standard Vortex Water Energizers are required, 1 Industrial Vortex Energizer will suffice. In addition to this, due to its heavy-gauge construction the Industrial Vortex Water Energizer is much less likely to get deformed or otherwise damaged.

Vibrational Properties of Different Metals

The harmonisers are all made of copper, and electroplated either with copper, silver or gold. According to Edgar Cayce and John Keely, different metals possess different etheric and esoteric properties, or vibrational frequencies. In readings by Edgar Cayce he referred to the use of the vibrations of gold and silver to bring about a harmonious coordination of the cerebro-spinal and sympathetic nerve systems. The following excerpts, from Dale Pond's "The Divine Triplet" illustrates the different vibrational properties of the various metals:

"Silver was known to the ancient Hebrews, Greeks and early Egyptian alchemists as a female element whose energy was closely related to the Moon. It is the best conductor of heat and electricity of all the metals. In the case of electricity conduction, silver appears to be almost superconductive to "transparent" to the current flow. When silver is made into a colloid solution it becomes the best bactericide and disinfectant ever known to medical science and is reported to be deadly against 650 varieties of germs, parasites, and bacteria."

"Gold is one of the first known of all metals. In Hindu doctrine, gold is the "mineral light." Our current word gold is derived from the Hebrew word zohov , which meant the color of fire, or from aor meaning light. The alchemists liken gold to the Sun and considered the metal as a male element. Gold is the image of solar light, and hence of the divine intelligence. Consequently, gold is symbolic of all that is superior. The Sun is the "greater light to rule the day" of Genesis. Gold is one of the least resistant to electrical flow and resists penetration by certain types of harmful radiation. Gold reflects all visible light frequencies. One of the properties of gold is its ability to amplify, encourage, stimulate or even energize a particular kind and range of vibrations. No other element or molecular compound has this quality."

Details of the The Original Vortex Water Energizer

The Vortex Water Energizer (approx. 20 cm height, 18 cm greatest diameter) is a spiraling copper device. It contains highly energized water, which has been prepared using an innovative new process called Implosion. Whilst this process is new to technology it is actually as ancient as the Universe.

Implosion is one of the fundamental processes behind nature. The Austrian Viktor Schauberger, the father of implosion technology saw implosion as the life generating principle and explosion as the life degenerating principle (Coats, 1996).

Because of the special water it contains, and its form, the Vortex Energiser acts as a cosmic antenna and amplifier which takes its energy directly from the Quantum Sea of Energy or Ether, a subtle form of energy which is all around us.

This means that no electrical power supply is required. Just placing the Vortex Water Energizer beside ordinary "lifeless" water will cause it to become charged and healthy once again. Direct contact with water is not necessary as the energy is transferred by way of vibration. This process is similar to one tuning fork picking up the vibration of another tuning fork, even if the first one has not been struck. This is also called resonance.

The photographs below taken by Prof. David Schweitzer through a phase contrast darkfield microscope at 4000x magnification show the changes to the micro cluster structure of water as a result of being energized with the Vortex Energizer. The middle and right images clearly show the increased structure and more vibrant biophoton emissions.

Biophotons are molecular light emissions, which, according to Prof. Fritz Popp, regulate cell growth and regulate cell regeneration. They also control all biochemical processes.

After his tests Prof. Schweitzer commented:

"Now, as you can see on the images, it is beyond words! The beauty, color and structure are unparallel to anything I have ever seen. I personally cannot explain, how and why this transformation of the water clusters has been so dramatic after applying the Vortex Energizer. There are two main cluster structures that appear after letting the water run for 10 minutes through the Energiser field. It is the branch shape and some geometric shapes of a very unusual kind. It is apparent that these two shapes represent the female and male, respectively. I have never seen water samples which contains both these shapes before. This is very balanced water. I used the tilting of 1.12 degrees of the table, 4000X computer enhancement, polarizing filter, with 820 NM light source.

Well, I guess, these are images, that talk for themselves!!!"

Regarding David Schweitzer's tests:

He attached the Vortex Energiser to the pipe just before the tap, through which he then let tap water run for 10 minutes. After 10 minutes he drew a sample of water from the tap, which produced the energized images.

Ordinary London tap water with no Cluster structure and small amounts of Biophoton emissions.

London tap water (at the same magnification) after energization with the Vortex Energiser showing increased structure and more vibrant biophoton emissions. Left structure: the branch like "female" structure. Right image: the geometrical "male" structure.

Independent tests carried out by the Biofield Laboratory in Vienna have shown that the physical properties pH and conductivity of water change in a subtle way with energization. In some tests the pH of acidic bi-distilled water was raised towards the 'normal' region of pure water. These changes appear to be a direct result of the clustering of the molecules with energization.

An aspect that requires further investigation is the transformation of dissolved minerals into highly charged colloidal particles. There are indications that this transformation is taking place, which might explain why many people experience a reduction in the taste of chlorine and hardness after fitting a Vortex Energiser to their domestic water system. This seems to suggest that, although chemicals are not actually eliminated, they might be transformed into a state in which they are less harmful to the human being. At any rate, drinking energized water strengthens the immune system and should make the body cope much better with the detrimental outside effects stemming from pollutants, chemicals and electromagnetic radiation.

Kinesiologically it has been shown that homeopathic and natural medicines are dramatically increased in their healing power by the Vortex Energiser.

Whereas ordinary lifeless tap water saps the energy field of organisms, tap water revived with the Vortex Energiser enhances and raises their overall energy field. This has been found to stimulate the organism's self-healing ability and immune system.

Many people have testified that water regains a remarkable natural quality and taste. Please read some of the testimonials.

The Vortex Energiser when attached to the domestic water inlet pipe, energizes all the water in the house - instantly and constantly. There are no further maintenance requirements.

Testimonials on the Vortex Water Energizer

In the industrialized world of today, aqua vivens (= "living", energetically charged water) is a rarity. In our drinking water supply systems, water is exposed to the detrimental energetic effects

of straight unnatural water pipes, high mains pressures and chemical treatments. Water is not allowed to move in its naturally winding way thereby causing loss of life force. Negative energetic imprints from chemicals, such as fertilizers, pesticides and sterilizers remain in the water, even after physical removal of such substances (Ludwig, 1991).

Independent research by Prof. Jacques Benveniste, Dr. Wolfgang Ludwig, Prof. David Schweitzer and others has shown that water can store information and picks up negative as well as positive energetic imprints via vibrational transfer. This "memory of water" phenomenon is attributed to the dipolar structure of the water. Hundreds of water molecules group together and form clusters, in which colloidal minerals and biophotons (light energy) interact. These clusters are very sensitive structures and are impressionable by vibrational influences. In this way water acts as a receiver and transmitter of information.

The natural world, which we are a part of, moves in a spiraling fashion. This is particularly obvious in shellfish, snails, antelope horns, pine cones and climbing plants such as clematis and ivy. In a more subtle way, all plants grow in a spiraling fashion always turning to face the sun. The DNA of all organisms forms a double helix spiral. Water flowing in a natural meandering river system forms whirls and eddies and never follows a straight path, and like all free falling objects, rain drops too, fall in a subtly spiraling motion.

Application and Installation

Attachment to Heating and Cooling Systems

Before you fix the Vortex Water Energizer permanently to the water mains pipe, we recommend you first use it on all closed heating and cooling systems, such as the central heating, the fridge and the freezer. Because these are closed systems, permanent fixture of the Vortex Water Energizer is not necessary. 24 hours is usually sufficient to transfer the energy permanently.

To energize the domestic central heating system lay the Vortex Energizer on the floor with the apex pointing at and touching a pipe coming down from one of the radiators. Leave the Vortex Energizer in this position for 24 hours, preferably with the heating on. This will ensure that the energy is taken on by the whole system.

You may now like to do the same with your fridge and freezer. All food contains water and will benefit from being energized. This has shown to improve the taste and prolong the life of food and drinks. Simply put the Vortex Water Energizer in the fridge for 24 hours to transfer the energy to food stored within the fridge and to the cooling system. The energized cooling system will ensure that new food coming into the fridge will be energized even after the Vortex Energiser has been removed. You may also leave the Vortex Water Energizer touching one of the cooling pipes coming from the compressor for 24 hours.

Please do not place the Vortex Energizer in the freezer. Freezing does not affect the performance of the Vortex Water Energizer but may result in the rivets (which seal the pipe ends) being forced out by the expanding water.

You may carry out the same procedure with your car's cooling system or even submerge the Vortex Energizer in your garden pond or swimming pool. An energized car cooling system transfers life force into the car cabin via the heat exchanger.

Attachment to Main Water Supply Pipe

After you have dealt with the closed heating and cooling systems we recommend that you attach the Vortex Energizer permanently to your drinking water system. You need the Vortex Energizer here at all times to ensure that new incoming water becomes energized. For maximum efficiency the Vortex Energiser needs to be fixed to the main pipe in such a way that its apex is in direct contact with the pipe. A convenient and simple way is shown in the drawing. The two straps provided are used to tie the apex and the top winding of the Vortex Energizer to the pipe.

This method of attachment works equally well for vertical and horizontal pipes. If this method of attachment doesn't work in your situation, having the apex of the Vortex Water Energizer touching the pipe as in the drawing on the previous page will work equally well.

In some types of accommodation, there may be more than one mains water supply pipe and pipes may be less accessible. In this case the Vortex Energiser can be placed in a position near the taps. In a bathroom for instance, water flowing into the sink, bath tub or shower takes on the energy from one centrally suspended Vortex Water Energizer. However, if energized water is required in the kitchen as well as bathroom, another Vortex Energiser will have to be installed.

The applications of the Vortex Energizer seem to be endless. So many uses can be found in the house, garden, office and in industrial applications. We invite you to experiment with the Vortex Energizer for yourselves.
